

RESOLVE to protect your drinking water

From the well or the tap, the watershed is the source of your drinking water. It's precious...

- Water makes up three-quarters of our planet.
- Only 1% of all the water on earth is accessible and clean enough for consumption.
- All people, plants and animals must share this same 1% water supply.

Make every drop count...

- A watershed is all the land that drains into a common water body, such as a stream, creek or lake.
- Preserving our watershed, means protecting our drinking water resources.
- Remember...small actions make a big difference. It's that simple.
